

ZYVORAI LABS · CUSTOMER DOCUMENTATION

Aurora

Getting Started

2026-08-29

Shortest path from install → signed-in product → first useful result.

Trial binaries ship from the public distro repo (no source in the trial). Source developers use this application repo with `make start`.

What you need

Requirement	Notes
Docker/Podman + compose	~8 GB RAM free for first pull
Web	<code>http://<host>:3000</code>
API	<code>http://<host>:8000/health</code>

1. Install (trial package)

Follow **GETTING-STARTED** in the trial tarball (infra compose → app compose → login).

Source: `make start` → web `:3000` , API `:8000` .

2. Sign in

Login	Password
Seeded admin (labs)	<code>marketing@zyvor.dev</code> / <code>Admin@321</code> — change immediately
SSO	When <code>SSO_ENABLED</code> + IdP configured

Never publish lab host IPs — use `localhost` or your `<host>` .

3. First useful workflow

1. Open **GTM workspace** (`/dashboard`) → create/onboard a product (website or docs URL).
2. **Add a source** → **Ingest** — wait until status is **completed** (workers must be up).
3. Open **Full Forge** (`/products/:id`) or **Executive Brief**.
4. Run one agent action (Q&A / Strategy / Outreach) → **Approve** → **Publish** when ready.

-

Aurora's web shell is persona-aware after login.

Surfaces

Surface	Purpose
GTM workspace /dashboard	Products, onboarding, persona entry
Full Forge /products/:id	Ingest, StageChain, agent tabs, approve/publish
Executive Brief	Read-only KPIs (approver/viewer default)
Sales Action / Pipeline	Leads and opportunities (editor default)
Admin	Portal accounts, tickets, workflow stages, Danger Zone
External portals	Customer / reseller / salesperson

Browse vs act

Brief and audit are safe. Ingest, agent runs, approve/publish, and Danger Zone purge mutate tenant data — confirm role and impact first.

-

First product (admin)

1. Sign in → [GTM workspace](#)
2. Create product with website/docs URL
3. [Full Forge](#) → Add source → Ingest → wait **completed**
4. Open Brief; run one agent tab; Approve → Publish

Sales day

1. [Sales Action](#) — Discover / Qualify / Outreach
2. [Pipeline](#) — create opportunity, move stages

Approve without Forge chrome

1. [Executive Brief](#)
2. Jump to Forge only when ingest or publish is required

Admin portals

1. [Portal Accounts](#) — approve signups
2. [Support Tickets](#)
